0. FOREWORD

AST was founded in Milan back in 1951 and, since then, it has been serving the most important Italian industrial sites, extending its market shares throughout the world. Production of special valves designed to satisfy customers' specific needs developed the most around 1980's, when AST designed its first valves for melamine plants.

Our expertise has been increasing thanks to the aid of the most updated design methods and the cooperation with important R&D centres for the execution of tests. AST, thanks to the gained expertise and flexibility, proposes itself as the ideal partner to develop specific products for plants with severe working conditions, granting the long-term reliability of its valves.

The Company's EDP system is constantly updated in order to secure an adequate monitoring of production, purchasing and logistic activities. AST's EDP system includes an important database for electronic documentation recording, allowing monitoring and immediate availability of documents of origin related to all materials of the valves.

1. BASIC FEATURES

Valve Series CV-870U, CV8408 and CV-8660 were specifically developed from the from basic families CV-8700, CV-8400 and CV-8600 to meet the requirement of a reliable and high performing valve for service on corrosive and crystalizing process fluid.

The valves have been developed on the basis of the experience gained in the field, combined to the optimization of fluid dynamic characteristics and the use of specific materials allowing to obtain high resistance to erosion and corrosion with process fluids particularly aggressive even at high pressures and high temperatures.

One of the peculiarities of the control valves series CV-870U and CV-8660 is that the body and the internal components are made from forged materials. The total absence of threads in all the parts in contact with processing fluid and the absence of stagnation areas avoid possible accumulations and crystallizations. The high stiffness of the stem and the actuator complete their features.

The design also has taken into consideration the simplicity of assembly and disassembly of internal parts to facilitate maintenance operations. Upon request, valves can be provided electrically traced, or jacketed for steam or diathermic fluids, in order to keep the valve body at the required temperature.

Flushing connections are provided on request, in order to keep clean the valve trim and to grant a good reliability of the valve. None of the valve components are made with copper or its alloys.

Valves can be equipped with flanged connections in accordance with DIN, ASME and lens type flange in accordance to the Licensor specification. Pneumatic or electric actuator can be installed, according to customer requirement, for control or on-off service.

The actuator and instrumentation provided with the valve are carefully selected and calibrated to ensure high control performance and reliability. AST can provide instrumentation with analog or digital communication protocols.

The actuator and instrumentation provided with the valve are carefully selected and calibrated to ensure high control performance and reliability. AST can provide instrumentation with analog or digital communication protocols.

The actuator and instrumentation provided with the valve are carefully selected and calibrated to ensure high control performance and reliability. AST can provide instrumentation with analog or digital communication protocols.

2. High Pressure ANGLE VALVES CV-870U for UREA Service

2.1. Main Features

The peculiarity of these valves is that they are made from a forged block body, in a single piece including bonnet. The total absence of threads in all the parts in contact with process fluid, the absence of stagnation areas and the stem stiffness complete their features.

The expertise gained in the field of urea and melamine plants, the optimization of fluid-dynamic features and the use of specific materials allow to obtain a high resistance to erosion and corrosion, at high pressure, at high operating pressure drops, and at high temperature.

Valve seat is clamped between upper and lower body by means of a flanged connection ensuring easy maintenance and allowing perfect seat to plug alignment.

2.2. Available trims

Contoured plug linear, modified linear and equal percentage flow characteristic for control service and quick opening for on-off service are available as standard.

Specialty designed anti-cavitation multi stage cascade trim for most critical service.

2.3. Materials

Body: ASTM A182 F316L, F316L urea grade, Duplex Stainless steels, F310 MoIn S31050 and others upon request.

Trim: special duplex stainless steels and other materials, in accordance with Licensor standard, are available.

Packing: glass loaded PTFE, proprietary design V-rings, to warrant perfect and reliable stem seal and a proper stem cleaning from crystalized fluid residual. Graphite packing for elevated temperature service is available on request.

2.4. Sizes and Pressure Classes

Size: From NPS 3/4" to NPS 12" as standard, higher dimensions are available on request.

Rating: Up to PN 400 or Class 2500, flanged connections with lenticular metal gasket according to customer specifications.

2.5. Seat leakage

Leakage IEC 60534-4 / ISA FCI 70-2 classes IV and V are available as standard. More stringent leakage classes are available on request.

2.6. Design Codes & Product Standards

IEC 60534, FCI 70-2, EN 12516, EN 1092, ASME B16.34, ASME B16.5, proprietary standards.

2.7. Options

- Special proprietary materials
- Valve body heating
- Packing flushing
- Flushing nozzles
- Anti-sand protection for valve and actuator stem
- Special tools for assembling/disassembling valves on field.

3. Urea High Pressure BUTTERFLY VALVES CV-8660

3.1. Main Features

This series of butterfly valves has been specially designed for applications on aggressive and corrosive fluids, as required for Urea plant application.

The valve body is from a single forged block. Labyrinth heating circuit for steam or diathermic fluids is available on request.

3.2. Materials

Body: ASTM A182 F316L, F316L urea grade, Duplex Stainless steels, F310 MoLn S31050 and others upon request.

Trim: special duplex stainless steels and other materials, in accordance with Licensor standard, are available.

Packing: glass loaded PTFE, proprietary design V-rings, to warrant perfect and reliable stem seal and a proper stem cleaning from crystalized fluid residual.

Graphite packing for elevated temperature service is available on request.

3.3. Sizes and Pressure Classes

Sizes: From NPS 4" to NPS 10" as standard, higher dimensions are available on request.

Rating: Up to PN 400 or Class 2500, flanged connections with lenticular metal gasket according to customer specifications.

3.4. Seat leakage

Leakage IEC 60534-4 / ISA FCI 70-2 classes II and III, with closure at 20° with elliptical disc plug, are available as standard. Class I with calibrated leakage at closed position and Class IV are available on request.

3.5. Design Codes & Product Standards

IEC 60534, FCI 70-2, EN 12516, EN 1092, ASME B16.34, ASME B16.5, proprietary standards.

3.6. Options

- Special proprietary materials
- Valve body heating
- Packing flushing
- Flushing nozzles
- Anti-sand protection for valve and actuator stem

CV-8661 – Cv table

travel	10%	100%
F_L	0.95	0.58
x_T	0.85	0.24

4. Low Pressure GLOBE VALVES CV-8408

4.1. Main Features

CV-8408 series has an integral stem with the plug, also having the function of guide, avoiding the presence of dead volumes where crystallizing fluid can accumulate. Valve seat is screwed inside the body ensuring easy maintenance and on field replacement.

4.2. Available trims

Contoured plug linear, modified linear and equal percentage flow characteristic are available as standard. Double stage anti cavitation trim is available for special applications.

4.3. Materials

Body: ASTM A351 CF8M or ASTM A351 CF3M as standard.
Trim: stainless steel or special duplex stainless steels are available.
Packing: V-Ring or Braided PTFE rings, reinforced graphite rings for high temperature service.

4.4. Sizes and Pressure Classes

Sizes: From NPS 1/2" to NPS 8" as standard, higher dimensions are available on request.
Rating: Class 150 to class 600, ASME or PN flanged connections available as standard.
 Connections according to other standards available as an option.

4.5. Seat leakage

Leakage IEC 60534-4 / ISA FCI 70-2 classes IV and V are available as standard. More stringent leakage classes are available on request.

4.6. Design Codes & Product Standards

IEC 60534, FCI 70-2, EN 12516, EN 1092, ASME B16.34, ASME B16.5.

4.7. Options

- Anti-sand protection for valve and actuator stem
- Steam jacketing for valve body heating

5. High Pressure ANGLE VALVES CV-870S for MELAMINE Service

5.1. Main Features

Having started the production of control valves for the melamine service in the 1970s, AST can provide the customer with the experience gained in over 40 years of design, production and on field experimentation.

Valve body is integral with bonnet and fabricated by two forged blocks angle welded with qualified process.

Design is free from threads and stagnation areas in all parts in contact with process fluid.

Valve plug is one piece integral with stem warranting high stiffness, and avoiding crevice corrosion.

Valve body is designed to maximize flow coefficients and optimize fluid-dynamic features.

Valve seat, outside shaped according to licenser design lenticular metal gasket, is clamped between body lower flange and connected piping flange, ensuring easy maintenance and allowing perfect seat to plug alignment.

Valve body and connection flanges are fully jacketed for heating by high temperature vaporized diathermic oil to avoid any fluid crystallization.

5.2. Available trims

Contoured plug linear, modified linear and equal percentage flow characteristic for control service and quick opening for on-off service are available as standard.

5.3. Materials

Appropriate selection of materials for valve *body and trim*, to maximize resistance to erosion and corrosion, at high pressure and temperature, including Hastelloy C276 and Alloy 59. Hastelloy C22, Hastelloy C276, Alloy 59 and others, in accordance with customer request.

Other materials, in accordance with Licensor standard, are available on request.

Packing: pure soft graphite with Inconel 600 wire reinforcement to warrant mechanical properties and corrosion resistance at operating temperature and providing a proper wipe effect on stem.

5.4. Sizes and Pressure Classes

Size: From NPS 3/8" to NPS 8" as standard, higher dimensions are available on request.

Rating: Up to PN 400 or Class 2500, flanged connections with lenticular metal gasket according to Licensor specifications.

5.5. Seat leakage

Leakage IEC 60534-4 / ISA FCI 70-2 classes IV and V are available as standard. More stringent leakage classes are available on request.

5.6. Design Codes & Product Standards

IEC 60534, FCI 70-2, EN 12516, EN 1092, ASME B16.34, ASME B16.5, proprietary standards.

5.7. Options

- Special proprietary materials
- Packing flushing
- Flushing nozzles
- Anti-sand protection for valve and actuator stem
- Special tools for assembling/disassembling valves on field.

6. Accessories

- Pneumatic, electropneumatic or digital positioners,
- Remote position feedback configuration for heavy duty services,
- Air set,
- Flow boosters,
- Lockup valves,
- Solenoid valves for fast strokes and for valve action to fail position,
- Mechanical stroke limiters,
- Hydraulic manual operator.

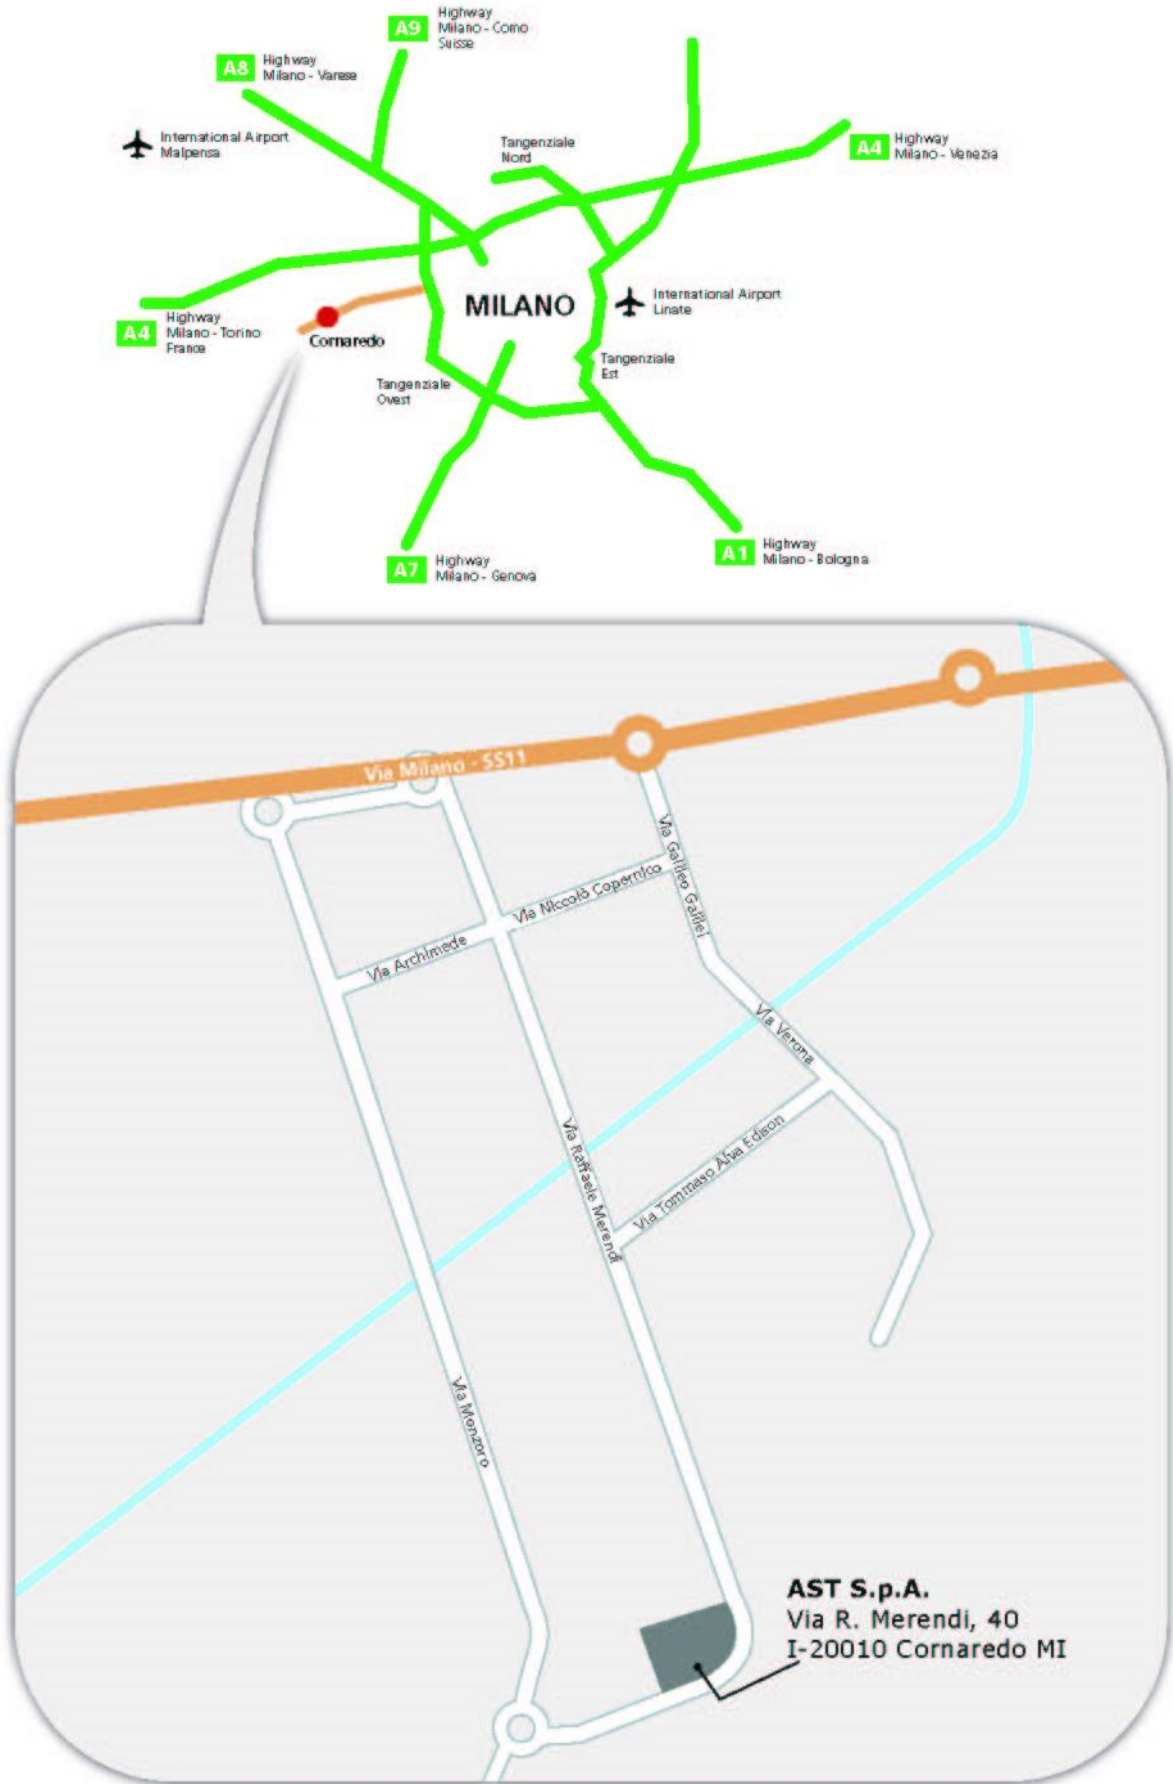

CV-870S - HP valve for melamine service, with full jacketed body - Flanged PN 320

CV-870S - HP control valve for melamine service, with full jacketed body and actuator support - Flanged PN 320.

CV-8661 - Steam jacketed butterfly valve for HP urea service - Flanged PN 320

In view of technical progress designs and dimensions are subject to change without notice.
